

ROSHNI THAKOR

Software Developer · Backend & Full-Stack · TypeScript · Node.js · MERN · Next.js · AI Integration

@ roshni.thakor.dev@gmail.com 📍 Ahmedabad, India in roshnithakor07 🔄 roshnithakor07 🌐 roshnithakor07.github.io

Software Developer with 3.7 years of experience building production-scale backend and full-stack systems. Strong in **TypeScript**, **Node.js**, **NestJS**, **MERN**, **MongoDB**, **Redis**, and **Next.js**, with expertise in **AI integration**, **scalable APIs**, and **performance optimization**.

EXPERIENCE

Eventus Security — Software Developer

📅 September 2022 – June 2026 📍 Ahmedabad, Gujarat

DevLens — AI-Powered Code Review Platform *TypeScript, NestJS, Next.js, MongoDB, Claude API*

- Architected an internal AI code review platform in **TypeScript** integrating the **Anthropic Claude API**; built a **streaming response pipeline** cutting perceived AI latency from **8s to under 1s** and a diff-parsing engine scoping analysis to changed Git hunks only.
- Implemented **JWT auth with RBAC** (developer / reviewer / admin) via NestJS Guards; adopted daily by the engineering team for PR reviews and security vulnerability detection.

Eventus ESDL Platform Dashboard *TypeScript, Next.js, NestJS, MongoDB, ClickHouse, Apache ECharts*

- Led full-stack development of Eventus's proprietary **SOC/EDR analytics dashboard** — an in-house alternative to **Trend Micro's ESDL platform** — deployed for critical infrastructure monitoring across India's regional power grid, giving clients a unified view of advisories, security alerts, threat data, and real-time KPI metrics.
- Handled large-scale **OpenSearch** queries (hundreds of millions of records) via **date-range** and **Lucene query** filters; resolved backend timeout errors on heavy requests by optimizing aggregation logic, query pagination, and response chunking.
- Migrated heavy analytics workloads from **MongoDB to ClickHouse** — fetching only required columns to avoid full table scans — resulting in significantly faster dashboard query performance and reduced infrastructure load without scaling up.
- Built configurable real-time **KPI widgets** (active alerts, threat counts, resolved incidents) using **Apache ECharts**; implemented **Redis caching** on frequently requested date-range queries with 24-hour TTL to reduce repeated OpenSearch hits and deliver smooth client experience.
- Wrote **Jest unit tests** covering NestJS services and React component logic; built modular **NestJS microservice layer** for separation of concerns across alert, threat, and KPI modules.

Health Check Automation System *MERN Stack, Redux Toolkit, Chart.js, SheetJS, docx.js, pdfmake, Nodemailer*

- Independently designed and delivered an internal automation platform adopted by the Customer Success team, reducing **Apex One** and **Deep Security** report preparation from **16–20 hours to under 1 hour**.
- Built automated reporting engine parsing **Excel files** via SheetJS, generating **27 dynamic Chart.js charts**, and exporting fully formatted **30+ page DOCX and PDF reports**; resolved async rendering race conditions by awaiting all chart-render promises before triggering export.
- Hardened application security via **VAPT-informed fixes** — added **security headers** (Helmet.js), **rate limiting** middleware to prevent brute-force attacks, and **input sanitization** across all API endpoints.
- Implemented **Two-Factor Authentication (2FA)** with a time-bound **6-digit OTP** delivered via email (Nodemailer); OTP expiry enforced server-side to prevent replay attacks.
- Developed **RBAC** with team-level data isolation and per-team report management to support secure multi-user workflows across the customer success organization.

PROJECTS

Calendly — Scheduling & Availability API *TypeScript, Node.js, Express, MongoDB, Redis, Google Calendar API*

- Timezone-aware availability engine in **TypeScript** with atomic conflict detection via **MongoDB transactions** to prevent double-bookings; **Redis-cached** free/busy slots to reduce redundant DB reads on high-traffic time windows.
- Integrated **Google Calendar OAuth2** for real-time sync; **HMAC-signed webhook engine** dispatching booking confirmation and cancellation events with signature verification.

QuickLink — URL Shortener & Analytics API *TypeScript, Node.js, Express, MongoDB, Redis*

- Redis cache-aside** on redirect path cut latency from **~120ms to ~4ms**; **sliding-window rate limiting** (10/min free, 100/min pro) with per-user key isolation; **JWT RBAC** gating custom aliases and link expiry.
- MongoDB aggregation pipeline** for click analytics by day, device, and referrer; **TTL-based Redis invalidation** with background cleanup jobs to auto-purge stale links without blocking the hot redirect path.

SKILLS

Backend

Node.js NestJS Express.js REST APIs JWT/RBAC

Frontend

React.js Next.js

Databases & Cache

MySQL MongoDB Redis

DevOps & Tools

Docker AWS S3 Vercel Git Claude API

PROGRAMMING LANGUAGES

TypeScript JavaScript Python Core Java (SE)

AI INTEGRATION PROJECTS

QuizCraft — AI Quiz Generator 🤖

Next.js 14 · MongoDB · Groq API · NextAuth.js

Generates up to **200 Qs** from text/images across **24 languages**; PDF/Word export with answer keys, shareable links, and response dashboard.

ComplexityIQ — Complexity Analyser

Next.js 14 · Groq API · Tailwind CSS · Pure SVG

Big-O analyser for **9 languages**; best/avg/worst breakdown, **0–100 score**, auto-refactor, compare mode, zero-dependency SVG chart.

INTERNSHIPS

Web Development Intern

- Flu Social | Jan – May 2022 | WordPress, PHP, MySQL, SEO

Web Development Intern

- LetsGrowMore | Sep – Oct 2021 | Angular 11, Express.js, MongoDB

ACHIEVEMENTS

- Top 18.5% (#367 / 1,983)** — HackerRank Orchestrate (Aug 2026); built a multimodal WhatsApp notification router using **Claude API** to classify messages as notify / digest / mute — reasoning over text, image posters, and voice notes with personalized user-context-aware routing.
- Top 26% (#460 / 1,773)** — HackerRank Orchestrate (June 2026); built a multi-modal AI agent using VLMs and structured prompting to verify insurance damage claims across images, conversations, and user risk context.

EDUCATION

B.E. in Information Technology

Saffrony Institute of Technology

📅 July 2018 – May 2022 📍 Mehsana, Gujarat

CGPA: 9.0 CPI: 8.85
